

TRICORP SIZE CHART: MEASURING SIZES FOR WORKWEAR

In this article we explain how you can measure your measurements for our workwear. In the size chart you can then read what your clothing size is, based on your measured sizes. To determine your workwear size, you need to measure four sizes. For outerwear it concerns the following sizes:

- Bust size (chest size)
- Waist (waist width)
- Hip size (hip width)

To determine your pants size, you only need the following size:

- Waist (waist width)

WORKWEAR SIZE MEASUREMENT TIPS

How do you make sure you measure your measurements correctly? For advice, we always give four tips for taking your measurements correctly:

- Use a tape measure
- Do not pull (too hard) on the measuring tape: this can cause the tape measure to stretch, causing the measurements to not be taken correctly
- Do not wear thick clothes when measuring
- Have someone else measure your measurements so that the measurements can be read properly

MEASURING MEASUREMENTS FOR WORKWEAR IN STEPS

STEP 1: MEASURING THE BUST

The bust is the widest point of the bust circumference. The recording of the bust is different for men and women. Women should hold the tape measure at the level of the nipples to measure the bust. Men hold the tape measure just under the armpits to measure the bust.

STEP 2: MEASURING THE WAIST WIDTH

The waist width can be measured by wrapping the measuring tape around the (natural) waist. Your waist is the narrowest part of your torso.

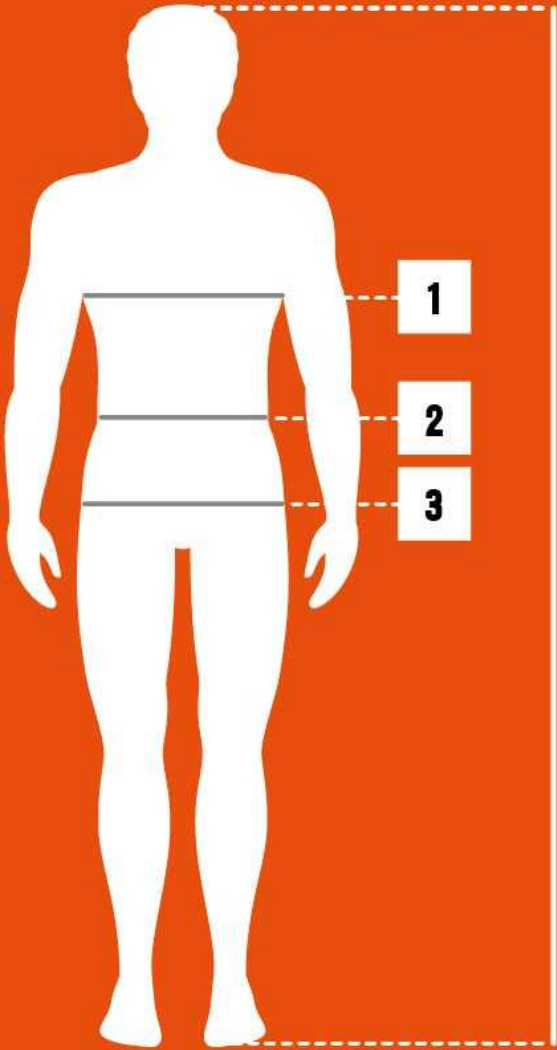

STEP 3: MEASURING THE HIP WIDTH

The hip width is the widest point of the hips. Measure by wrapping the tape measure around the widest point of the hips.

TRICORP SIZE CHART

Below you will find the different size charts that you can generally use for our products. For both men and women there is a size chart for outerwear and a size chart for jeans. In addition, there will soon be a size chart for each product that is specific to that product.

BIG SIZES

At Tricorp you can find workwear in large sizes. Our sizes run up to 8XL. Please note: as of January 1, 2019 our large sizes have changed. What used to be 5XL is now 4XL and what used to be 7XL is now 5XL. In addition, the large sizes 6XL, 7XL and 8XL have been added to our range. This way everyone can order his or her workwear in the right size. In the size charts above you can read which dimensions belong to which size.

BASIC FIT VS. SLIM FIT

In addition to measuring the size, choosing the fit is also important. Our workwear with a slim fit fits well around your body and is therefore a bit tighter. Do you prefer to wear your work clothes a little more loosely around your body? Then choose a basic fit model! Your size does not play a role when choosing a fit: your size is the same for both basic fit and slim fit.
